Mathematics 9 Linear Relations Graphing Linear Equations

A. Definition

- 1) Linear equation: an equation that when graphed forms a straight line.

B. Graphing a Linear Equation

In order to graph a linear equation you must first create a table of values with at least 3 acceptable points.

Example 1

Step #1 Use the equation to complete the table of values.

$$x + 2y = 10$$

x	y
2	4
-6	8
6	2
-4	7

$$\begin{aligned}x + 2y &= 10 \\(2) + 2y &= 10 \\-2 + 2y &= 10 - 2 \\2y &= \frac{8}{2} \\y &= 4\end{aligned}$$
$$\begin{aligned}x + 2y &= 10 \\(6) + 2y &= 10 \\-6 + 2y &= 10 - 6 \\2y &= \frac{4}{2} \\y &= 2\end{aligned}$$

$$\begin{aligned}x + 2y &= 10 \\(-6) + 2y &= 10 \\+6 + 2y &= 10 + 6 \\2y &= \frac{16}{2} \\y &= 8\end{aligned}$$
$$\begin{aligned}x + 2y &= 10 \\(-4) + 2y &= 10 \\+4 + 2y &= 10 + 4 \\2y &= \frac{14}{2} \\y &= 7\end{aligned}$$

Step #2 Once the table is complete, use the points in the table to plot on the graph. Connect the points together with a straight line from end to end on the graph and label the line with the equation.

$$\begin{aligned}(2, 4) \\(-6, 8) \\(6, 2) \\(-4, 7)\end{aligned}$$

Example 2

$$3x - 2y = -6$$

x	y
2	6
-2	0
0	3
4	9

$(2, 6)$
 $(-2, 0)$
 $(0, 3)$
 $(4, 9)$
 Won't fit on the graph.

$$\begin{aligned}
 3x - 2y &= -6 \\
 3(2) - 2y &= -6 \\
 6 - 2y &= -6 \\
 -2y &= -12 \\
 \frac{-2y}{-2} &= \frac{-12}{-2} \\
 y &= 6
 \end{aligned}$$

$$\begin{aligned}
 3x - 2y &= -6 \\
 3(-2) - 2y &= -6 \\
 -6 - 2y &= -6 \\
 -2y &= 0 \\
 \frac{-2y}{-2} &= \frac{0}{-2} \\
 y &= 0
 \end{aligned}$$

$$\begin{aligned}
 3x - 2y &= -6 \\
 3(0) - 2y &= -6 \\
 0 - 2y &= -6 \\
 -2y &= -6 \\
 \frac{-2y}{-2} &= \frac{-6}{-2} \\
 y &= 3
 \end{aligned}$$

$$\begin{aligned}
 3x - 2y &= -6 \\
 3(4) - 2y &= -6 \\
 12 - 2y &= -6 \\
 -2y &= -18 \\
 \frac{-2y}{-2} &= \frac{-18}{-2} \\
 y &= 9
 \end{aligned}$$

Assignment: Graphing Linear Equations Assignment

Name: _____

Graphing Linear Equations Assignment

A. For each of the following, complete the table of values and then graph and label the linear equations on the graph provided.

1) $x + y = 7$

x	y
3	
-3	
0	
5	

2) $3x + y = -10$

x	y
-1	
-3	
0	
-5	

3) $-x + 2y = -8$

x	y
2	
-2	
0	
-4	

4) $\frac{1}{2}x + y = 4$

x	y
6	
-2	
4	
-6	

5) $3x - y = 6$

x	y
3	
-1	
0	
1	

6) $\frac{2}{3}x - 2y = -8$

x	y
3	
0	
-3	
-6
