THE UNIT CIRCLE

A. Special Right Triangles Review

The other day we looked at 3 Special Triangles and the unique ratios of the sides.

If we consider the triangles above, but use a hypotenuse length of one unit, then we would get the following triangles.

$$\frac{\sqrt{2}}{\sqrt{2}} = 1$$

$$\frac{1 \times \sqrt{2}}{\sqrt{2} \times \sqrt{2}} = \frac{\sqrt{2}}{2}$$

$$\frac{\sqrt{3}}{\sqrt{3}} = 1$$

$$\frac{1}{\sqrt{3}} = \frac{1}{\sqrt{3}}$$

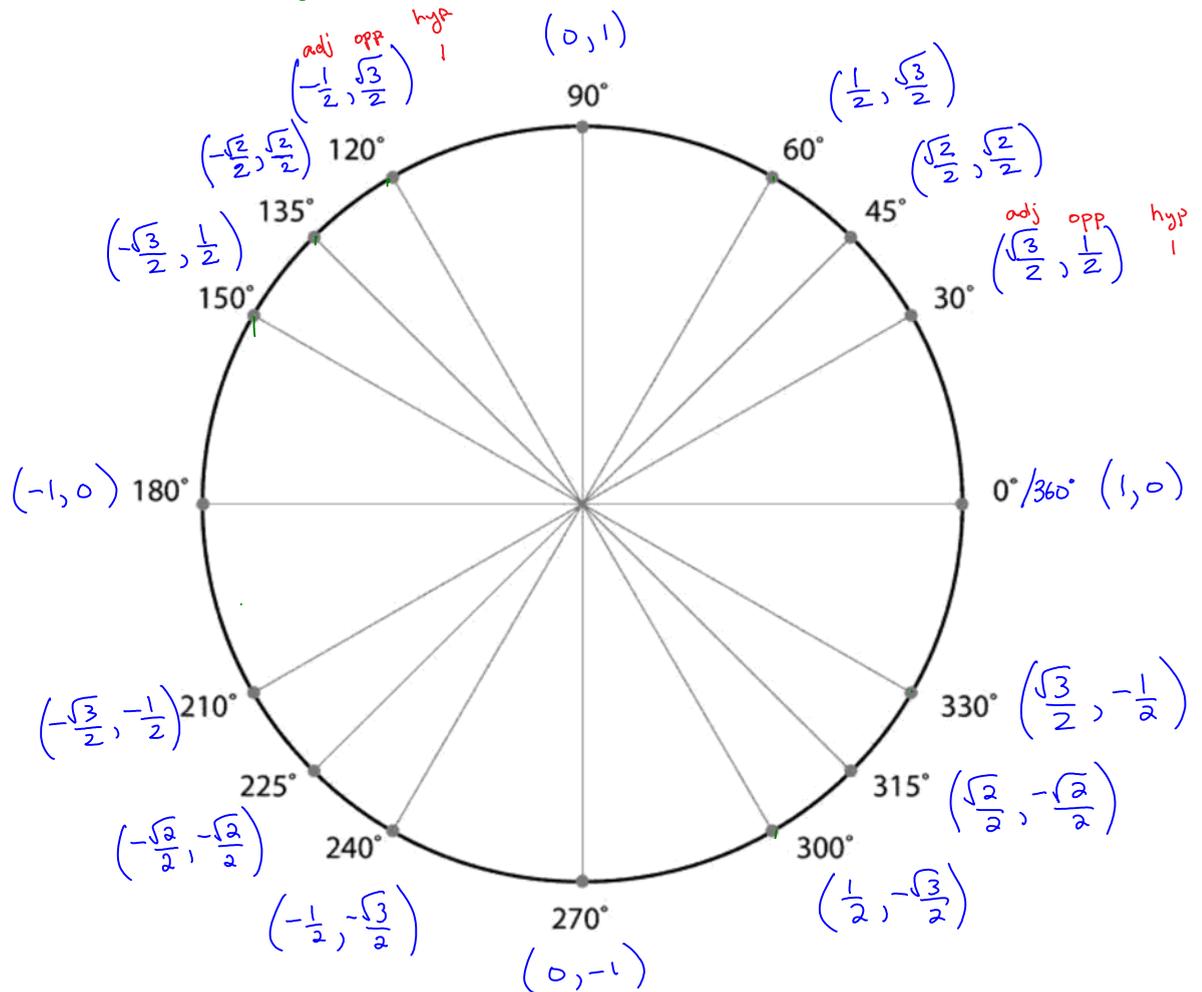

$$\frac{\sqrt{3}}{\sqrt{3}} = \frac{\sqrt{3}}{3}$$

Same as original

B. The Unit Circle

The Unit Circle is formed by creating a circle where the outside edges of the circle are located one unit from the origin. The Special Triangles are then reflected over both the x & y axes. This allows us to find specific coordinates and exact trigonometric ratios for these special angles within the circle.

★ The coordinates of the unit circle are based on the adjacent and opposite sides of the special triangles. The hypotenuse will always be one!
